

new Penz **4Z 700**

The Penz 4Z 700 is the first crane in its class with a 7 meter maximum hydraulic outreach. The former version had a maximum outreach of 6 meter. Because of this extra meter in reach the 4Z becomes a real multipurpose crane.

The 4Z is a crane which is unique and not produced by any other manufacturer of professional H1B4 spec cranes.

This gives the 4Z an excellent competitive position! The only professional crane of high quality on the market in the 4 mt class.

Standard the crane is equipped with outrigger stabilizers with a maximum width of 2,8 m and optional hydraulic folding pantograph supports are available with a maximum width of 4,1 m. Also a frame for mounting on a three point bridge for tractors makes part of the optionals.

There is also a version for recycling applications available, the 4ZR 700, also with 7 meter reach. The 4ZR is standard equipped with load holding valves. Because of its low weight of only 920 kg this crane can be mounted on smaller trucks and can be equipped with smaller poly grapples.
